

VEGA – Mining Product and Services (MPS)

VEGA – MPS joins hand for Mill lining Design and Development

MPS

Mr. Mark Ewers

Mr. Mark Ewers, Director, holds over 3 decades experience in Mining Industry.

Mr. Eddie Jamieson

Mr. Eddie Jamieson, Director / Principal Metallurgist, holds over 2 decades experience in Mining Industry

Eddie has extensive operational expertise across a range of metallurgical processes including gold, copper and iron ore with a particular strength in the comminution field. His broad range of experience also covers processing plant commissioning, operation and optimisation; operations supervision; tailings management; laboratory testwork and project studies; acquisition due diligence and client representation; project management, plant maintenance, and quality

VEGA – MPS

- o Steel Mill Linings

Mining Products and Service (MPS) has over 25 years experience in steel mill linings. MPS personnel have extensive experience in the design, manufacture and optimization of engineered components for grinding mills, having operated large steel and iron foundries both in Australia and Internationally. This experience ensures they can provide practical operational requirements in designing steel mill lining systems.

Lining systems are designed specifically to suit individual customer requirements and process conditions. MPS perform calculations and simulations based on power draw, slurry flow, trajectory and throughput to ensure that Lining Systems are designed to offer maximum benefit to our customers.
